This journey to the beginnings of the physician's art brings to life the civilizations of the ancient world--Egypt of the Pharaohs, Greece at the time of Hippocrates, Rome under the Caesars, the India of Ashoka, and China as Mencius knew it. Probing the documents and artifacts of the ancient world with a scientist's mind and a detective's eyes, Guido Majno pieces together the difficulties people faced in the effort to survive their injuries, as well as the odd, chilling, or inspiring ways in which they rose to the challenge. In asking whether the early healers might have benefited their patients, or only hastened their trip to the grave, Dr. Majno uncovered surprising answers by testing ancient prescriptions in a modern laboratory. Illustrated with hundreds of photographs, many in full color, and climaxing ten years of work, The Healing Hand is a spectacular recreation of man's attempts to conquer pain and disease.

As Dr Needham's immense undertaking gathers momentum it has been found necessary to subdivide volumes into parts, each bound and published separately. The first two parts of Volume IV deal respectively with the physical sciences and with the diverse applications of physics in the many branches of mechanical engineering. The third deals with civil and hydraulic engineering and with nautical technology.

This book offers a new interpretation of the spatial-political-environmental dynamics of water and irrigation in long-term histories of arid regions. It compares ancient Southwest Arabia (3500 BC-AD 600) with the American West (2000 BC-AD 1950) in global context to illustrate similarities and differences among environmental, cultural, political, and religious dynamics of water. It combines archaeological exploration and field studies of farming in Yemen with social theory and spatial technologies, including satellite imagery, Global Positioning System (GPS), and Geographic Information Systems (GIS) mapping. In both ancient Yemen and the American West, agricultural production focused not where rain-fed agriculture was possible, but in hyper-arid areas where massive state-constructed irrigation schemes politically and ideologically validated state sovereignty. While shaped by profound differences and contingencies, ancient Yemen and the American West are mutually informative in clarifying human geographies of water that are important to understandings of America, Arabia, and contemporary conflicts between civilizations deemed East and West.

This book presents a novel and innovative approach to the study of social evolution using case studies from the Old and the New World, from prehistory to the present. This approach is based on examining social evolution through the evolution of social institutions. Evolution is defined as the process of structural change. Within this framework the society, or culture, is seen as a system composed of a vast number of social institutions that are constantly interacting and changing. As a result, the structure of society as a whole is also evolving and changing. The authors posit that the combination of evolving social institutions explains the non-linear character of social evolution and that every society develops along its own pathway and pace. Within this framework, society should be seen as the result of the compound effect of the interactions of social institutions specific to it. Further, the transformation of social institutions and relations between them is taking place not only within individual societies but also globally, as institutions may be trans-societal, and even institutions that operate in one society can arise as a reaction to trans-societal trends and demands. The book argues that it may be more productive to look at institutions even within a given society as being parts of trans-societal systems of institutions since, despite their interconnectedness, societies still have boundaries, which their members usually know and respect. Accordingly, the book is a must-read for researchers and scholars in various disciplines who are interested in a better understanding of the origins, history, successes and failures of social institutions.
