The handbook outlines the principles, equipment, materials maintenance, methodology, and interpretation skills necessary for liquid penetration testing. The third edition adds new sections on filtered particle testing of aerospace composites, quality control of down hole oil field tubular assemblies, and probability of detection, and considers new regulations on CFC fluids throughout the text. The study reports on the redesign of a part of the Navy Nondestructive Testing (NDT) School's curriculum and the evaluation of the redesign effort. The effort has resulted in two new NDT package courses: A core training package including material common to all NDT methods and visual testing, and a magnetic particle testing liquid penetrant testing training package. The new packages emphasize structured laboratory projects and programmed instruction as opposed to traditional classroom lectures. In addition, much new material, including nonnuclear NDT applications, is noted in the new training packages.
